INDEX

Practical	Date	Name of Practical	Page	Signature
No.			No.	
1	14/10/2022	Implement and demonstrate the FIND-S	4	
		algorithm for finding the most specific		
		hypothesis based on a given set of training		
		data samples. Read the training data from		
		a .CSV file.		
2	21/10/2022	For a given set of training data examples	6	
		stored in a .CSV file, implement and		
		demonstrate the Candidate-Elimination		
		algorithm to output a description of the		
		set of all hypotheses consistent with the		
		training examples		
3	28/10/2022	Write a program to demonstrate the	9	
		working of the decision tree based ID3		
		algorithm. Use an appropriate data set for		
		building the decision tree and apply this		
		knowledge to classify a new sample.		
4	04/11/2022	Build an Artificial Neural Network by	14	
		implementing the Back-propagation		
		algorithm and test the same using		
		appropriate data sets.		
5	11/11/2022	Write a program to implement the naïve	17	
		Bayesian classifier for a sample training		
		data set stored as a .CSV file. Compute		
		the accuracy of the classifier, considering		
		few test data sets.		

_	10/11/10000		22	
6	18/11/2022	Assuming a set of documents that need to	23	
		be classified, use the naïve Bayesian		
		Classifier model to perform this task.		
		Built-in Java classes/API can be used to		
		write the program. Calculate the accuracy,		
		precision, and recall for your data set.		
7	25/11/2022	Write a program to construct a Bayesian	27	
		network considering medical data. Use		
		this model to demonstrate the diagnosis of		
		heart patients using standard Heart		
		Disease Data Set. You can use		
		Java/Python ML library classes/API		
8	02/12/2022	Apply EM algorithm to cluster a set of	30	
		data stored in a .CSV file. Use the same		
		data set for clustering using k-Means		
		algorithm. Compare the results of		
		these two algorithms and comment on the		
		quality of clustering. You can add		
		Java/Python ML library classes/API in the		
		program.		
9	09/12/2022	Write a program to implement k-Nearest	34	
		Neighbour algorithm to classify the iris		
		data set. Print both correct and wrong		
		predictions. Java/Python ML library		
		classes can be used for this problem.		
10	16/12/2022	Implement the non-parametric Locally	36	
		Weighted Regression algorithm in order		
		to fit data points. Select appropriate data		
		set for your experiment and draw graphs		
		graphs		

TITLE: Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.

```
import csv
a = []
with open('enjoysport.csv', 'r') as csvfile:
    for row in csv.reader(csvfile):
        a.append(row)
print(a)

TITLE: Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.

CODE:

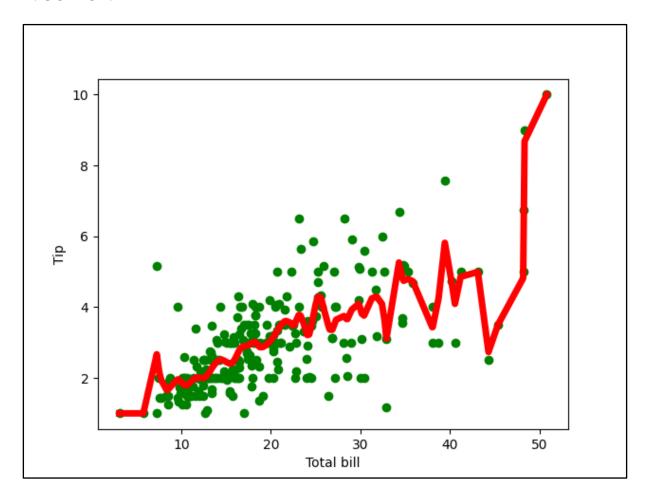

A.

```
import matplotlib.pyplot as plt
import pandas as pd
import numpy as np
def kernel(point, xmat, k):
   m, n = np.shape(xmat)
   weights = np.mat(np.eye((m)))
   for j in range(m):
        diff = point - X[j]
        weights[j, j] = np.exp(diff * diff.T / (-2.0 * k ** 2))
   return weights
def localWeight(point, xmat, ymat, k):
   wei = kernel(point, xmat, k)
   W = (X.T * (wei * X)).I * (X.T * (wei * ymat.T))
   return W
def localWeightRegression(xmat, ymat, k):
   m, n = np.shape(xmat)
   ypred = np.zeros(m)
```

```
for i in range(m):
        ypred[i] = xmat[i] * localWeight(xmat[i], xmat, ymat, k)
    return ypred
# load data points
data = pd.read_csv('D:/ML_Pracs/tips.csv')
bill = np.array(data.total bill)
tip = np.array(data.tip)
# preparing and add 1 in bill
mbill = np.mat(bill)
mtip = np.mat(tip)
m = np.shape(mbill)[1]
one = np.mat(np.ones(m))
X = np.hstack((one.T, mbill.T))
# set k here
ypred = localWeightRegression(X, mtip, 0.5)
SortIndex = X[:, 1].argsort(0)
xsort = X[SortIndex][:, 0]
fig = plt.figure()
ax = fig.add subplot(1, 1, 1)
ax.scatter(bill, tip, color='green')
ax.plot(xsort[:, 1], ypred[SortIndex], color='red', linewidth=5)
plt.xlabel('Total bill')
```

```
plt.ylabel('Tip')
plt.show();
```
